

The EMSI Pro-Fit™ Knee is a Rehabilitative brace used for limiting harmful knee movement while it's healing after an injury or surgery. The wrap around hinged knee brace is made of neoprene for a secure fit. The brace is free of latex and hypoallergenic.

The open wrap Flexion / Extension Hinged Knee Brace provides exceptional medial and lateral stability of the knee. Flexible application with durable poly-centric hinges provides both flexion and extension stops at selected degrees (0°, 15°, 30°, 60°, 90°). Open wrap design offers easy application and can be adjusted to fit a wide variety of patients. The wrap-around brace closes at the front (anterior) of leg. There are a pair of Velcro straps above and below the kneecap for additional adjustments for personal fit and comfort. The closures for these are also at the front of the leg.

A patient can qualify for a knee brace if they have one of the common diagnoses and /or indications related to the knee:

- Osteoarthritis
- Sprains and Strains of the knee
- Dislocation of the knee

The EMSI Pro-Fit™ Back is a highly breathable Lumbar Sacral Orthotic (LSO) designed to provide spinal support to relieve lower back pain and maximize immobilization without sacrificing comfort. The molded panels comfortably contour to each individual's body structure. The closure system works with the compression straps in conjunction with rigid posterior and anterior panels to provide sagittal balance.

An LSO can be considered medically necessary if any of the following conditions are met :

- To reduce pain by restricting mobility of the trunk
- To facilitate healing following an injury to the spine or related soft tissues
- To otherwise support weak spinal muscles or a deformed spine; and/or
- To facilitate healing following a surgical procedure on the spine or related soft tissue
